

TASKTIC PRESSKIT

Tasktic is a powerful, yet easy to use task manager app for iPhone, iPad and Apple Watch.

It offers many advanced functionalities usually available only in expensive productivity apps:

- Unlimited tasks, with optional due date and notification
- Projects
- Tags
- Sync between devices (via iCloud)
- Recurring tasks (every n hours, days, weekdays or months, with an optional end)
- Siri and Reminders for Mac integration
- Statistics and achievements
- Tasktic has a Notification Center widget, a share extension and a Watch app
- Multitasking is supported on compatible iPads

Tasktic is free with some limitations to the most advanced features (max 3 projects, no tags, no stats / achievements, no recurring tasks).

Users have the option to upgrade to **Tasktic Pro** (an in-app purchase that costs just \$4,99) to unlock everything, forever.

For users who really love the app, **Tasktic Pro Big Supporter** is a \$9,99 in-app purchase that offers the same functionality of the Pro version, plus a special virtual achievement to show our appreciation for the great support.

With **Tasktic 1.5**, we've also introduced **Tasktic Pro Value Edition**, a release specifically targeted to students, veterans and people looking for a job; this in-app purchase offers the same advanced features of **Tasktic Pro** for only \$ 3.99.

Tasktic is a Swift app crafted in Italy by Cesare Forelli. Development began in February 2015 and the app launched on November 10, 2015; the latest version is **Tasktic 1.5** (available on the App Store since July 25, 2016). It is currently localized in English and Italian.
